

Problem Statement

You have to analyze 2 decades of the Nifty 50 index in the Indian Stock Market and come up with strategies to invest for higher returns in the future.

Tasks to be Performed:

1. Analyse the indicators in the dataset that best explain the volatility and unpredictable nature of the stocks in the last decade.

Ans : Added graph to indicate the volatility at stock level in a decade

2. Choose promising stock based on your analysis for your portfolio

Ans : Recommended stocks for portfolio :

- **TITAN, HINDUNILVR, ADANI PORTS, UPL, BRITANNIA**
- **BAJAJFINSV, ASIANPAINT, INDUSINDBK, KOTAKBANK, HDFC**

3. Build a dashboard where you can analyse the performance of the stocks

Ans : Another python file with name “Dashboard - Indian Stock Market Investment.ipynb” attached with results.

4. Feature engineer and build machine learning solutions for the business

Requirements.

Ans : Solution in file Indian Stock Market Investment.ipynb
